2 Package option(s)

2.1 Color

Using the `color` option will change the colors used by the `\LCD` command for printing the screen using `\tiscreeen`. The colors are defined as `tiscreeenfg` (foreground, i.e. font color) and `tiscreeenbg` (background) and redefined like this:

```

1 % Add this to your preamble
2 \definecolor{tiscreeenbg}{HTML}{5d9345}
3 \definecolor{tiscreeenfg}{HTML}{FFFFFF}

```

3 LCD size

The default LCD size is 8×16 (the size of the TI-82 STATS). It can be changed by redefining the variables used to determine the size of the display or by using the original \LCD command.

Buttons

5 Usage

The `\tibtn...` commands only prints the button and are useful when displaying buttons inline. The `\tibtnextra...` commands shows the extra functionality of the button (accessed by the  and  buttons). See section 6 for defined buttons and section 7 for how to define custom buttons.

7 Custom buttons

Buttons are defined using the `\tibtn` and `\tibtnextra`. It's often convenient to define a `\tibtn` command then use it inside `\tibtnextra` (See example below). See section 2.2 for a list of defined colors.

`\tibtn[<text color>]{<button color>}{<text>}`

`\tibtnextra{<middle>}{<top left>}{<top right>}`

```

1 \def\tibtnfoo{\tibtn[black]{tibtnblue}{FOO}}
2 \tibtnfoo{}

4 \def\tibtnextrafoo{\tibtnextra{\tibtnfoo}{BAR}{BAZ}}
5 \tibtnextrafoo
